DETAILED ACTION

This application filed June 20, 2001 is a continuation in part of 09/147,712, filed February 23, 1999, now abandoned, which is a national stage filing of PCT/EP95/02980, filed July 26, 1995.

Applicants' amendment filed December 26, 2001, paper number 5, has been received and entered. The specification has been amended. Claims 1-23 have been canceled. Claims 24-49 have been added. Claims 24-49 are pending and currently under examination.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 24-33, drawn to a method making a cell having mismatch repair comprising inactivating the mismatch repair system of a cell, classified in class 435, subclasses 252, 325, and 800 subclass 235.1, for example depending on the type of cell.
- II. Claims 34-47, drawn to a method of homologous recombination wherein the cell has a mismatch repair deficiency phenotype and the vector and targeted sequences are not homologous, classified in class 435, subclass 455.
- III. Claims 48 and 49, drawn to a method of making a transgenic animal comprising inserting a genetically modified stem cell into a blastocoel and transplanting said

Art Unit: 1632

chimeric embryo into a pseudopregnant recipient wherein a transgenic animal is born, and said transgenic animal, classified in class 800, subclasses 8, 25.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case each of the inventions are drawn to different and unique methods to perform different functions. Each of the methods require different method steps and specific types of materials to practice, and would result in materially different outcomes and products as set forth in the preamble of the claims. Group I could be used to generate mismatch repair deficient cell for use in the method of group of II or III, however instead of actively inactivating a mismatch repair system a naturally occurring variant could be isolated and used in these methods. Further, use of a cell deficient in mismatch repair for use in a method requiring homologous recombination would not be obvious over obtaining the cell because the methods of homologous recombination require that specific sequences be replaced which would be impeded by lack of mismatch repair. Each of the methods requires a separate search and consideration as far as they are directed to practicing the particular method claimed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1632

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
